Advantages of Modern Data Warehouse in Azure

- Rapid integration of data into a single version of facts
- Reduced time, cost and efforts of data integration
- Enablement for new innovative data models
- Flexibility and scalability of the cloud for any data and all users
- Great data asset for predictive and advanced analytics

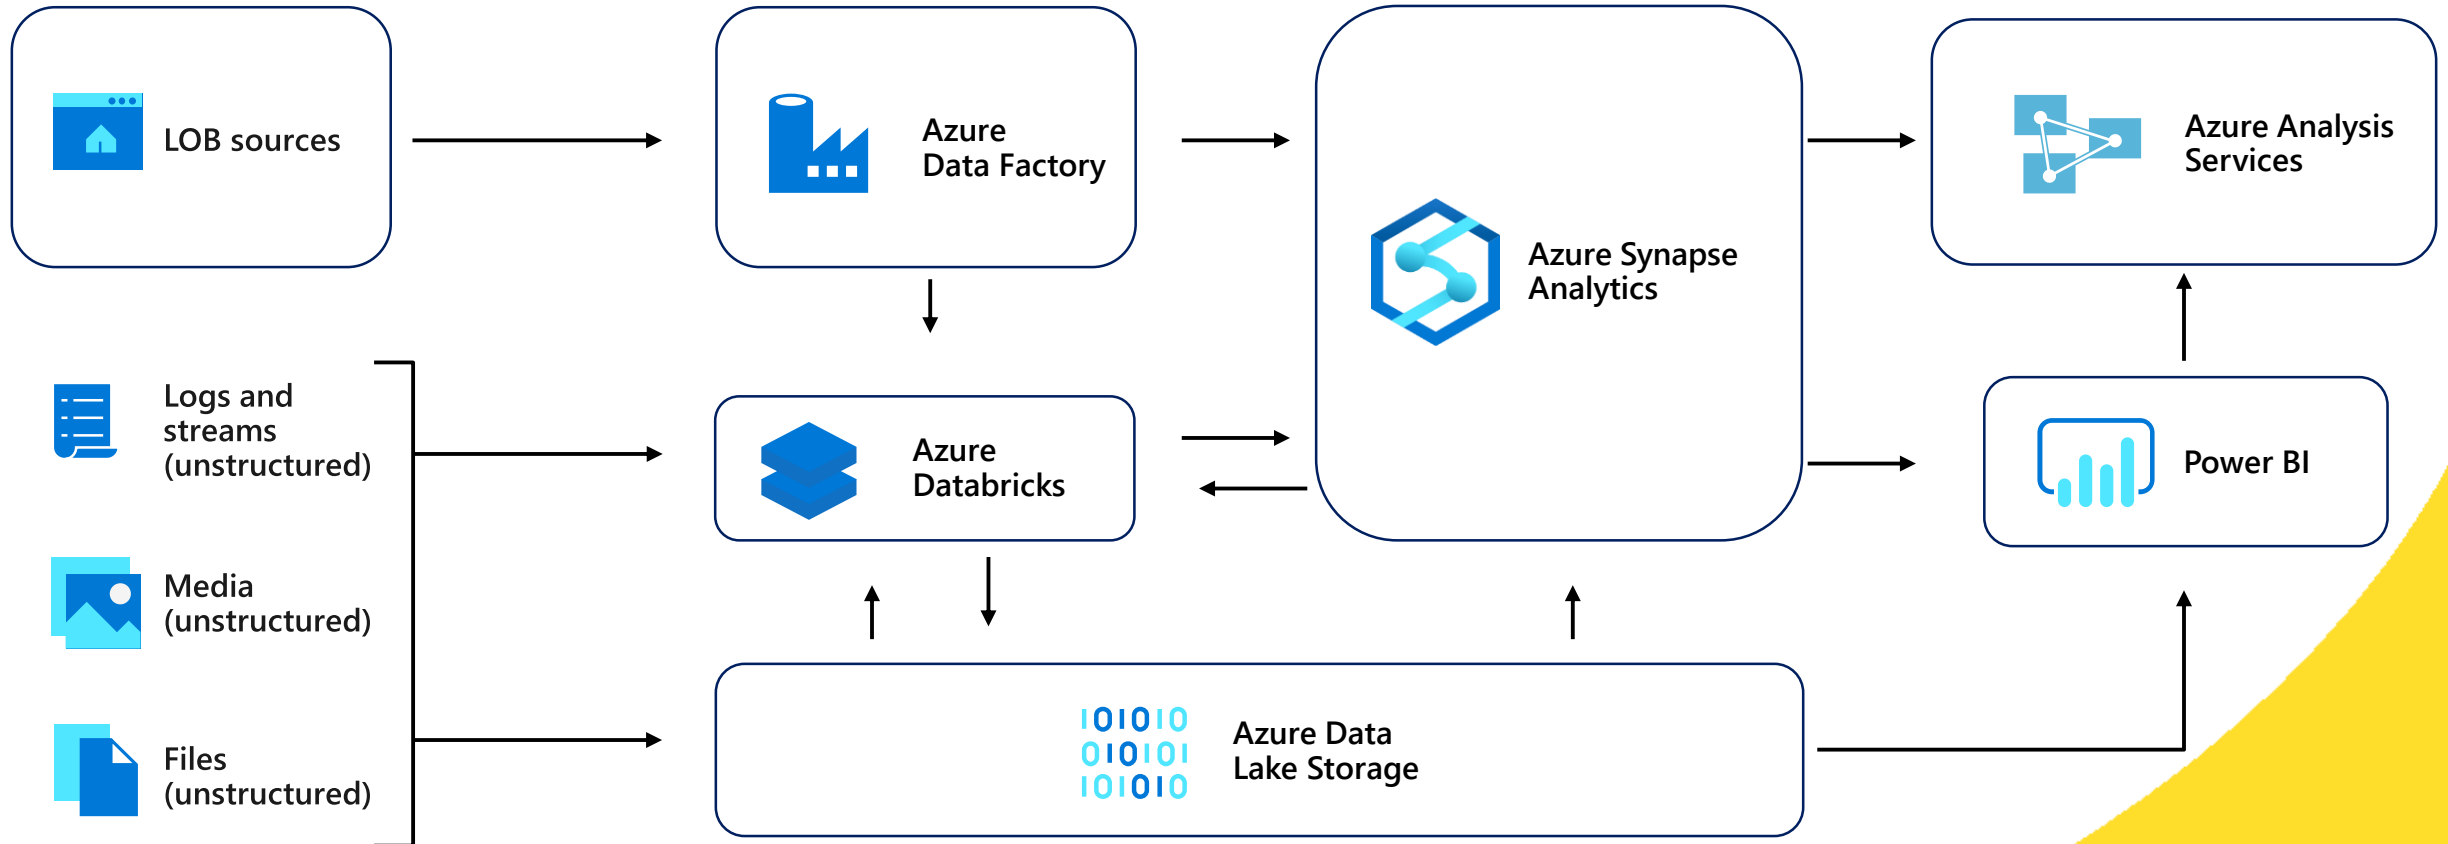

Choose the Best Partner and Platform for MDW

Do you find it difficult to choose the right vendor of cloud platform for MDW and a trusted partner for MDW deployment? These are the most important aspects you should consider:

- Leader of the market
- Platform for any size of data
- Wide choice of integrated services
- Market execution
- Cloud focus for scalability and elasticity
- Customer loyalty
- Safety – trusted partner

MDW in Azure Reference Architecture

Architecture Summary

Every company has different systems that support operations (ERP, CRM, databases and files). Those data should be integrated - this is the main purpose of building and maintaining Modern Data Warehouse

Usually, we send the data into the cloud, but first, we need to store them properly.

Typical Azure path:

- We start with data sources
- Extract, Load and Transform process
- Load the data with transformation and advanced analytics to the data lake/landings/staging storage
- Store corporate reference data in a data warehouse
- Serve business data model to the Business Intelligence users (Power BI)
